

Andres Salazar

Brighton and Hove, UK

 andressalazar.alturo@gmail.com  07300562915  linkedin.com/in/andres-salazar-alturo/

Electronic engineer specialized in AI and adaptive systems at the University of Sussex. Expertise lies in developing and applying machine learning algorithms and data processing to solve complex problems. Strong technical background complemented by exceptional analytical, technical and communication skills gained through my degree and work experience. Seeking to contribute to software development projects with a fast-paced organization.

Technical Skills:

Languages: Python, MATLAB, C++, Java

Packages: TensorFlow, Scikitlearn, Pandas, NumPy, NLTK, Flask, FastAPI

Cloud/Serverless: Google Cloud (functions, triggers, deployed ML models), Firebase (authentication, firestore, storage), Cloud Architecture

Tools and practices: Linux, GitHub, Docker, VS Code, MVP/Prototype Development, YouTrack, Arduino, Microsoft Office

Experience:

AI and electronics engineer, Eluxevo Limited, Brighton, UK, September 2024 – Ongoing.

- Developed software for novel AI models and algorithms.
- Designed embedded system electronics and control software. This included the control of, and data gathering of, the embedded control system.
- Integrated cloud services to optimize and scale the deployment of the control system.
- Integrated multiple devices into the system and its respective communication with the cloud.
- Designed and developed safe, quality and ethical system considering stakeholders/users requirements, technology capabilities and limitations, cost and time management.
- Collaborated with the project team (multidisciplinary team) to facilitate the achievement of objectives. Identifying, reducing and proactively mitigating risks.
- Optimized activities to align with the strategic objectives of the business.
- Active exhibitions participation.

Lead campus coordinator, Kiwibot, – Ohio, USA, August 2022 – December 2022

- Responsible for the start-up campus operations (University of Findlay, Ohio, USA).
- Led operations and logistics team for the designed area.
- Managed human talent for the execution of the operation.
- Managed available resources for the execution of the operation.
- Planned and executed Kiwibot brand at the University.
- Incentivized the use of the service through marketing campaigns.
- Oversaw the deployment of the robot fleet on campus and around the city.
- Developed and managed Kiwibot website (Non-code with Shopify and WordPress) at the University.
- Supported robot fleet maintenance and data area.

Research assistant, Universidad de Ibague, Ibague – Colombia, January 2020 – March 2021

- Supported research in a project exploring rice crops prediction methods using imaging.
- Processed information related to the yield of a rice crop.
- Defined descriptors for yield prediction based on reflectance and thermographic maps.
- Mapped the defined descriptors and constructed the database for the regression system.
- Developed and validated performance prediction algorithm based on machine learning.

Education:

2023 – 2024. University of Sussex. Artificial Intelligence and adaptive systems MSc.

- **Overall:** Distinction
- **Dissertation:** “Neuroevolutionary swarm robotics with novelty search” - Distinction

2015 – 2021. Universidad de Ibague. Electronic engineering.

Additional skills and achievements:

-
- Participated in Evolve annual technology event organized by Silicon Brighton
 - Participated in Elemental London at Excel London as exhibitor with Eluxevo.
 - Second place winner at Universidad de Ibague research week as speaker with the research work "Yield prediction system in early stages of rice crops based on multispectral, RGB images and machine learning techniques".

Hobbies:

-
- Brazilian jiu jitsu purple belt (one stripe) and part Brighton BJJ School team.
 - Brighton AI meetings.
 - Power lifting enthusiast.
